CTRI Number	CTRI/2022/01/039072 [Registered on: 03/01/2022] Trial Registered Prospectively	
Last Modified On:	29/01/2022	
Post Graduate Thesis	No	
Type of Trial	Observational	
Type of Study	Follow Up Study	
Study Design	Single Arm Study	
Public Title of Study	Observational study to check the effectiveness and safety of Remoglifozin in high risk patients with type 2 Daibetes Mellitus.	
Scientific Title of Study	Post-approval, concurrent, observational Study to assess clinical effectiveness and safety of RemogliFlozin In high-risk patiEnts with type 2 Diabetes Mellitus	
Trial Acronym	REFINE study	
Secondary IDs if Any	Secondary ID	Identifier
	TPL2006237	Protocol Number
Details of Principal Investigator or overall Trial Coordinator (multi-center study)	Name	Dr Krishnaprasad K
	Designation	General Manager, Medical Services

Health Condition / Problems Studied	Health Type	Condition
	Patients	(1) ICD-10 Condition: E119 Type 2 diabetes mellitus without complications,

Intervention / Comparator Agent	Type	Name	Details

Inclusion Criteria	Age From	18.00 Year(s)
	Age To	59.00 Year(s)
	Gender	Both
	Details	1. Male or female patients 18 to 59 years. 2. Known T2DM cases with uncontrolled HbA1c >7 % requiring or receiving Remogliflozin etabonate for not more than two weeks 3. T2DM cases with one or more additional risk factors or established CVD that is stable for >3 months following hospitalization 4. Patients willing follow-up for 24 W at the same centre.

ExclusionCriteria	Details	1. Hypersensitivity to SGLT2i or Metformin Extended release formulation 2. Unstable or untreated CVD with HF not receiving either ARNI or Diuretics 3. CKD with eGFR <45 ml/min 4. Hepatic enzyme elevation X3 ULN 5. DKA and/or history or prior use of Dapagliflozin or Canagliflozin or Empagliflozin 6. For women only - currently pregnant (confirmed with positive pregnancy test) or breast-feeding 7. Type 1 diabetes mellitus patients 8. Sexually active woman of childbearing age not practicing accepted birth control method 9. Urinary tract infection or acute pyelonephritis in the 30 days prior to study entry

Method of Generating Random Sequence	Not Applicable
Method of Concealment	Not Applicable
Blinding/Masking	Not Applicable

Primary Outcome	Outcome	TimePoints
	Mean changes from baseline in glycated hemoglobin (HbA1c) level at 12 W	Mean changes from baseline in glycated hemoglobin (HbA1c) level at 12 W

Secondary Outcome	Outcome	TimePoints
	1. Proportion of participants with treatment emerging adverse events during observational period. 2. Change of HbA1c in T2d cases with more than or is equal to 1 additional risk factor at 12 W. 3. Change of HbA1c in in T2d cases with CVD at 12 W. 4. Change in SBP and DBP at 12W and 24 W. 5. Change in PPBG at 12W.	At 12 W and 24 W.

Brief Summary	Name of Sponsor/ Company: Torrent Pharmaceuticals Ltd, India Name of Study Drug: ZUCATOR* (Remogliflozin Etabonate Tablets 100 mg) Title of Study: Post-approval, concurrent, observational Study to assess clinical effectiveness and safety of "Remogliflozin" In high-risk patients with type 2 Diabetes Mellitus (REFINE study) EudraCT no.: Not applicable Indication: type 2 diabetes Objectives: To evaluate clinical effectiveness and safety of Remogliflozin as add on therapy in high-risk T2D cases conducted at real world outpatient settings of India. Study population: Type 2 diabetes Study design: Post-approval, concurrent, observational, single-arm, open label study. Study endpoints: a. Primary Endpoint: • Mean changes from baseline in glycated hemoglobin (HbA1c) level at 12 W b. Secondary Endpoints: • Proportion of participants with treatment emergent adverse event during observation period • Change for HbA1c in T2d cases with ≥ 1 additional risk factor at 12 W • Change for HbA1c in T2d cases with CVD at 12 W • Change in SBP and DBP at 12W and 24 W • Change in PPBG at 12W Number of patients (planned): 3000 patients will be enrolled in the study from 100 different sites across India. Main criteria for inclusion: • Male or female patients 18 to 59 years • Known T2DM cases with uncontrolled HbA1c $>7\%$ requiring or receiving Remogliflozin etabonate for not more than two weeks • T2DM cases with one or more additional risk factors or established CVD that is stable for >3 months following hospitalization • Patients willing follow-up for 24 W at the same center Main criteria for exclusion: • Hypersensitivity to SGLT2i or Metformin Extended release formulation. • Unstable or untreated CVD with HF not receiving either ARNI or Diuretics • CKD with eGFR <45 ml/min • Hepatic enzyme elevation X3 ULN • DKA and/or history or prior use of Dapagliflozin or Canagliflozin or Empagliflozin • For women only - currently pregnant (confirmed with positive pregnancy test) or breast-feeding • Type 1 diabetes mellitus patients

- Sexually active woman of childbearing age not practicing accepted birth control method
- Urinary tract infection or acute pyelonephritis in the 30 days prior to study entry

Duration of study participation: 24 W

Duration of observation: 24 W

Investigational product, dosage and mode of administration:

- Remogliflozin Etabonate is indicated in adults aged 18 years and older with type 2 diabetes mellitus to improve glycaemic control as:
- Monotherapy when diet and exercise alone do not provide adequate glycaemic control.
- Add on therapy with metformin, together with diet and exercise, when these do not provide adequate glycaemic control.
- The recommended dose is Remogliflozin etabonate 100 mg twice daily for monotherapy and add-on therapy with metformin. As observed with other SGLT2 inhibitors, when Remogliflozin etabonate is used in addition to insulin or an insulin secretagogue, such as a sulphonylureas, a lower dose of insulin or insulin secretagogue may be considered to reduce the risk of hypoglycaemia.

Criteria for evaluation:

Effectiveness:

Clinical response: The clinical response will be assessed for all patients who have received at least 12 W of treatment especially for the change in HbA1c to be assessed

Safety: Adverse events: as per WHO classification, incidence of ~Common™ Treatment emergent adverse events of ~% 1%.

STATISTICAL METHODS:

- Data will be presented using descriptive statistics in the form of frequencies and percentages for qualitative variables, means, medians, standard deviations, minimal and maximal values and 95% confidence interval for quantitative variables.
- The continuous and categorical variables will be assessed for significance using the Student's T and Fischer's Exact Test with $p < 0.05$ considered to be clinically significant using the two-tailed test

Primary efficacy analyses:

- Change in HbA1c will be analyzed in the T2d cases enrolled in 1:1 for history of multiple risk factors or CVD history at 12th W. Considering a treatment difference in HbA1c for 0.075% +/-0.8 % between the two groups, a non-inferiority design study was planned with NI margin of 20%. There are still insufficient data for the longitudinal changes in HbA1c with the use of statins.
- Taking into consideration the dropout rate that is expected at the end of 24 W therapy with Remogliflozin, a total sample size of 2971 or 3000 cases had been planned for enrollment at 100 centers across India.
- In case of SAE, the clinical investigator or the sponsor (representative) needs to report the Event information on pv@torrentpharma.com on the CDSCO Suspect ADR Report Form once aware of the event as Date of Reporting (DOR) in addition to Date of Event (DOE).
