	Intervention	NIL	NIL
Inclusion Criteria	Age From	18.00 Year(s)	
	Age To	90.00 Year(s)	
	Gender	Both	
	Details	The study will include patients who underwent major oncosurgery at MPMCC in the period of 1 January 2023 to 30 June 2023 Patients of adult age group (more than 18 years of age) will be included To assess the pattern of expenditure on anesthesia drugs and consumables incurred by patients who underwent major oncosurgery in a tertiary care cancer center in northern India.	
ExclusionCriteria	Details	Patients who do not have complete anesthesia billing records or have missing data for any of the variables of interest will be excluded from the study.	
Method of Generating Random Sequence	Not Applicable		
Method of Concealment	Not Applicable		
Blinding/Masking	Not Applicable		
Primary Outcome	Outcome		TimePoints
	To determine the average expenditure on anesthesia drugs and consumables per patient for major oncosurgeries.		Retrospective analysis of billing records
Secondary Outcome	Outcome		TimePoints
	To determine the head of expenditure for drugs and consumables related to anesthesia.		Retrospective analysis of billing records
	To evaluate the variation in anesthesia drugs and consumables related expenditure based on patient ASA		Retrospective analysis of billing records

	status.	
	To assess the relation of surgical DMG (disease management group and the expenditure on anesthesia drugs and consumables	Retrospective analysis of billing records
	To analyze the influence of different surgical procedures on the expenditure on anesthesia drugs and consumables.	Retrospective analysis of billing records
	To examine the relationship between anesthesia technique and the expenditure on anesthesia drugs and consumables.	Retrospective analysis of billing records
	To find the correlation between the duration of surgery (OT in-out time) and the expenditure on anesthesia drugs and consumables.	Retrospective analysis of records
	To explore the differences in expenditure between general and private category patients.	Retrospective analysis of billing records

Brief Summary	The increasing costs of healthcare services pose a significant challenge for both patients and healthcare systems worldwide. Major oncosurgeries, particularly in tertiary care cancer centers, are complex procedures that involve multidisciplinary teams, advanced technologies, and specialized care. Alongside the surgical intervention	

itself, anesthesia services play a critical role in ensuring patient safety, comfort, and optimal surgical outcomes. However, anesthesia-related expenditure has been recognized as a substantial component of the overall healthcare costs associated with these procedures.

Understanding and analyzing the financial implications of anesthesia services in major oncosurgeries can provide valuable insights for healthcare providers, policymakers, and patients alike. It allows for a comprehensive evaluation of the costs associated with anesthesia techniques, surgical procedures, patient characteristics, and other factors that may influence expenditure. Such insights can contribute to the development of cost-effective strategies, resource allocation optimization, and informed decision-making to enhance the delivery of healthcare services.

This retrospective study aims to assess the anesthesia drugs and consumables related expenditure incurred by patients who underwent major oncosurgery at Tata Memorial Centre (MPMMCC) Varanasi. By examining the data collected over a six-month period, we seek to measure the pattern of expenditure on anesthesia drugs and consumables for major oncosurgeries. Through a comprehensive analysis of various variables, including patient ASA physical status, surgical disease management group (DMG), surgical procedure, anesthesia technique, duration of surgery (OT in-out time), patient category (general/private), occupation, yearly income, urgency of surgery, nature of surgery (primary/reoperation), total anesthesia billing, and expenditure breakdown, we aim to gain valuable insights into the expenditure on anesthesia drugs and consumables for major oncosurgeries.

Major oncosurgeries, also known as oncologic surgeries, are surgical procedures performed to diagnose, treat, or remove cancerous tumors or lesions from the body. These surgeries are characterized by their complexity and the significant removal of cancerous tissue or affected organs. The primary goal is to eliminate or reduce the cancer's presence while preserving as much healthy tissue and function as possible. Major oncosurgeries may involve removing tumors, lymph nodes, or nearby tissues that are affected by cancer.

This health economic study seeks to bridge the gap in knowledge regarding anesthesia-related expenditure for major oncosurgeries in tertiary care cancer center. By unraveling the financial implications, we aim to

contribute to the body of evidence necessary for informed decision-making, policy development, and resource allocation in the field of anesthesia services, with the overarching goal of improving healthcare delivery and patient outcomes.
