Intervention / Comparator Agent				
	Type	Name	Details	

Inclusion Criteria	Age From	18.00 Year(s)	
	Age To	60.00 Year(s)	
	Gender	Both	
	Details	1. Caregivers of patients admitted in LGBRIMH,Tezpur 2. Age between 18 years and below 60 years	
ExclusionCriteria	Details	1. Caregiver diagnosed with mental illness or major physical illness 2. Paid care giver	
Method of Generating Random Sequence	Not Applicable		
Method of Concealment	Not Applicable		
Blinding/Masking	Not Applicable		
Primary Outcome	Outcome	It is expected that people with adequate knowledge will have positive attitude towards ECT	TimePoints
			12 month
Secondary Outcome	Outcome	Caregivers of patient admitted in tertiary mental health care setting will have positive attitude regarding ECT	TimePoints
			12Month
Target Sample Size	Total Sample Size="50" Sample Size from India="50" Final Enrollment numbers achieved (Total)= "Applicable only for Completed/Terminated trials" Final Enrollment numbers achieved (India)="Applicable only for Completed/Terminated trials"		
Phase of Trial	N/A		
Date of First Enrollment (India)	01/03/2022		
Date of Study Completion (India)	Applicable only for Completed/Terminated trials		
Date of First Enrollment (Global)	Date Missing		
Date of Study Completion (Global)	Applicable only for Completed/Terminated trials		
Estimated Duration of Trial	Years="1" Months="11" Days="30"		
Recruitment Status of Trial (Global) Modification(s)	Not Applicable		

Recruitment Status of Trial (India)	Closed to Recruitment of Participants

Individual Participant Data (IPD) Sharing Statement	Will individual participant data (IPD) be shared publicly (including data dictionaries)? Response - NO
Brief Summary	Background: Electroconvulsive therapy is an effective treatment for psychological disorders. Some patient may require treatment with ECT, when it is seen that other treatment have not been effective in preventing illness relapse. However it is considered as one of the controversial and misunderstood procedure especially among the caregivers. It may evoke strong fear and anxiety among the patients and caregivers. As it was found that researcher came across many caregivers of getting ECT who had inadequate knowledge as well as anxiety towards use of ECT. Similarly it was found in a study that, with increased in knowledge among the caregivers the misconceptions and anxiety had been decreased. Aim: To assess the correlation of knowledge and anxiety towards ECT among the caregivers of patient in a tertiary mental health care setting METHODOLOGY- A non experimental, descriptive correlational research design with quantitative research approach will be adopted for the proposed study. The caregiver of patient admitted at LGBRIMH who will be the population for the study. The 100 numbers of caregivers of admitted patient during data collection period will be considered as sample, the participants will be selected through total enumeration method. A self structured Socio-demographic and clinical proforma, Hamilton anxiety rating scale to assess the anxiety, Patient's and their relatives knowledge regarding ECT questionnaire to assess the knowledge will be used to collect the data. The informed consent will be taken from the participants after proper explanation and assurance. Confidentiality and anonymity of participants and data will be maintained. The study do not include any invasive procedure. The collected data will be analysed with descriptive(measures of central tendency and standard deviation) and inferential statistic(Karl pearson correlation co-efficient).
