CTRI Number	CTRI/2020/11/029298 [Registered on: 23/11/2020] Trial Registered Prospectively																
Last Modified On:	05/03/2021																
Post Graduate Thesis	No																
Type of Trial	Interventional																
Type of Study	Drug																
Study Design	Single Arm Study																
Public Title of Study	A scientific study to understand the effect of three combined medicine in the Management of Postoperative Symptoms in Patients who Underwent Surgical Treatment for Anorectal Disorders																
Scientific Title of Study	A Prospective, Open Label, Single Center Clinical Study to Evaluate the Effectiveness and Safety of Fixed Dose Combination of Sucralfate 7% w/w, Metronidazole 1% w/w, and Lignocaine Hydrochloride 4% w/w in the Management of Postoperative Symptoms in Patients who Underwent Surgical Treatment for Anorectal Disorders

Health Condition / Problems Studied	Health Type	Condition	
	Patients	(1) ICD-10 Condition: K629 Disease of anus and rectum, unspecified,	
Intervention / Comparator Agent	Type	Name	Details
	Intervention	CremaGel-H	FDC of Sucralfate 7% w/w, Metronidazole 1% w/w, and Lignocaine Hydrochloride 4% w/w Dosage: OD Route of Administration: Topical Application Duration of Therapy: 06 weeks
	Comparator Agent	NIL	NIL
Inclusion Criteria	Age From	18.00 Year(s)	
	Age To	64.00 Year(s)	
	Gender	Both	
	Details	1. Male and female patients above 18 up to 64 years (both inclusive) 2. Patients who are undergoing surgery of hemorrhoids, fistulae, and / or anal fissures and are willing to take CremaGel-H for their postoperative symptoms 3. Patients willing to comply with study procedures and requirements 4. Patients willing to sign and date written informed consent form (ICF) to participate in the study	
ExclusionCriteria	Details	1. History of inflammatory bowel disease, multiple fistulas, perianal dermatitis, proctitis, pulmonary or cardiovascular complications, or poorly controlled diabetes mellitus 2. Anal fistulas or anal fissure due to other causes such as Crohn disease, anal suppuration, and abscesses 3. Recent history (< 2 weeks) of chemotherapy 4. Diagnosis of active cancer, severe anemia, hypoalbuminemia, or immunocompromise 5. Past history of hypersensitivity to any of the ingredients of the study product, including Metronidazole, Lignocaine Hydrochloride, Sucralfate, or any other ingredient in the formulation 6. Patients on Class I anti-arrhythmic drugs or anticoagulant treatment as the toxic effects are additive and generally synergistic 7. Any past or present conditions / diseases that Investigator considers inappropriate for a patient to participate in the study 8. Patients who are unwilling to have an examination of anal wounds 9. Pregnant and lactating females	
Method of Generating Random Sequence	Not Applicable		
Method of Concealment	Not Applicable		
Blinding/Masking	Open Label		

Primary Outcome	Outcome	TimePoints
	1. Proportion of patients with minimal clinically important difference (MCID) at 3 and 6 weeks after surgery where MCID is defined as reduction in 10 points on 100 mm VAS scale at 3 and 6 weeks after surgery from the baseline score 2. 2. Mean reduction in anal pain (on 100 mm VAS score) from baseline	at baseline, Week 3 and Week 6
Secondary Outcome	Outcome	TimePoints
	Proportion of patients with complete wound healing	at 3 and 6 weeks after surgery
	Mean reduction in Itching on a 5-point scale ranging from score 1 (not present) to score 5 (unbearable)	from baseline to 3 and 6 weeks after surgery
	Mean reduction in Bleeding score on a 5 point scale ranging from 1 episode per 2 weeks to 5 bleeding episodes per week	from baseline to 3 and 6 weeks after surgery
	Mean reduction in Burning on a 4 point scale ranging from score 0 (no symptoms) to score 3 (severe intensity symptoms)	from baseline to 3 and 6 weeks after surgery
Target Sample Size	Total Sample Size="50" Sample Size from India="50" Final Enrollment numbers achieved (Total)= "Applicable only for Completed/Terminated trials" Final Enrollment numbers achieved (India)= "Applicable only for Completed/Terminated trials"	
Phase of Trial	N/A	
Date of First Enrollment (India) Modification(s)	20/12/2020	
Date of Study Completion (India)	Applicable only for Completed/Terminated trials	
Date of First Enrollment (Global)	Date Missing	
Date of Study Completion (Global)	Applicable only for Completed/Terminated trials	
Estimated Duration of Trial	Years="0" Months="10" Days="0"	
Recruitment Status of Trial (Global) Modification(s)	Not Applicable	
Recruitment Status of Trial (India)	Open to Recruitment	
Publication Details	NIL	

Individual Participant Data (IPD) Sharing Statement	Will individual participant data (IPD) be shared publicly (including data dictionaries)? Response - NO
Brief Summary	Various studies have reported the effectiveness and safety of Sucralfate, Metronidazole and Lignocaine when used alone in the treatment of anorectal disorders. However, the combination of these 3 drugs (Sucralfate, Metronidazole with Lignocaine Hydrochloride) would be a viable option to provide the additive effects in terms of improvement in postoperative pain relief and wound healing. Hence, the current study is designed to evaluate the effectiveness and safety of FDC of Sucralfate 7% w/w, Metronidazole 1% w/w, and Lignocaine Hydrochloride 4% w/w (CremaGel-H by Abbott India Ltd) in terms of wound healing, postoperative pain, itching, bleeding, and burning after surgery of hemorrhoids, fistulae and anal fissures. This FDC has been approved by Drug Controller General of India for the treatment of bedsore, hemorrhoids, fistulae, and anal fissure on 23 August 2004. Croissance Clinical Research Pvt Ltd Hyderabad is providing Data Management support to this study.
